

Arundathi K L

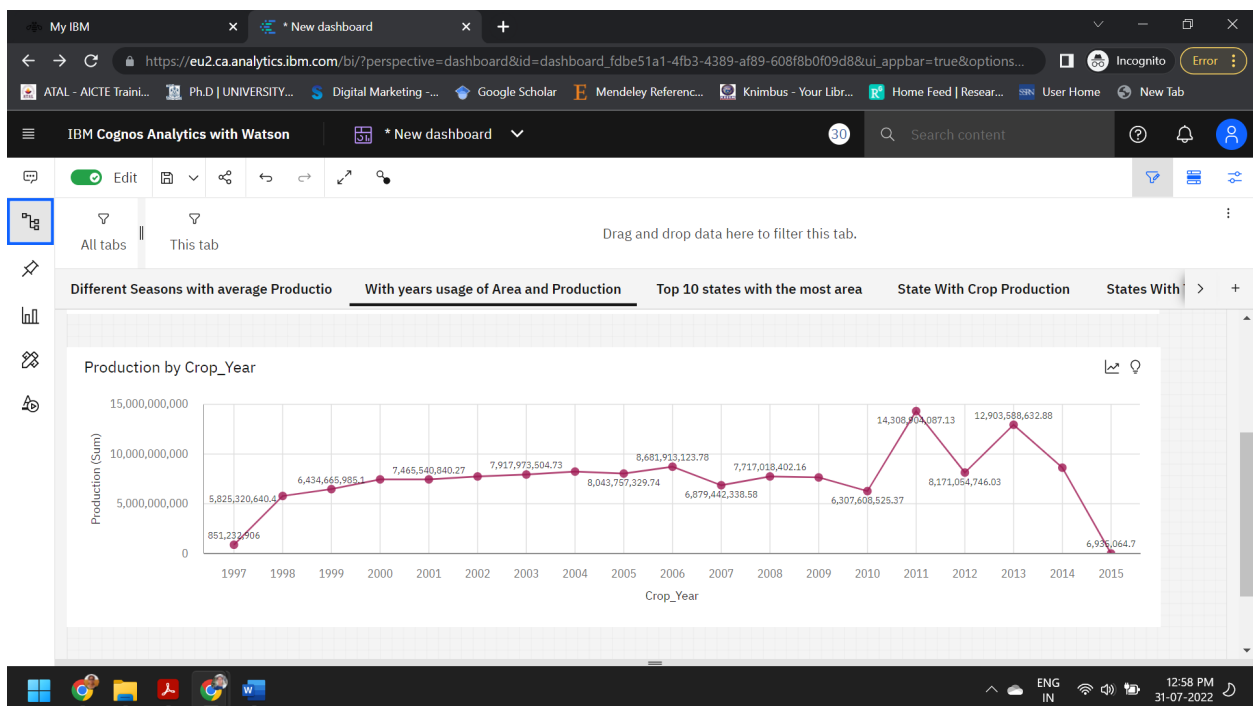

The graph is showing the Average production in different seasons. Highest production (approximately 59.5 % more) happened in Winter, followed by Kharif and Rabi seasons.

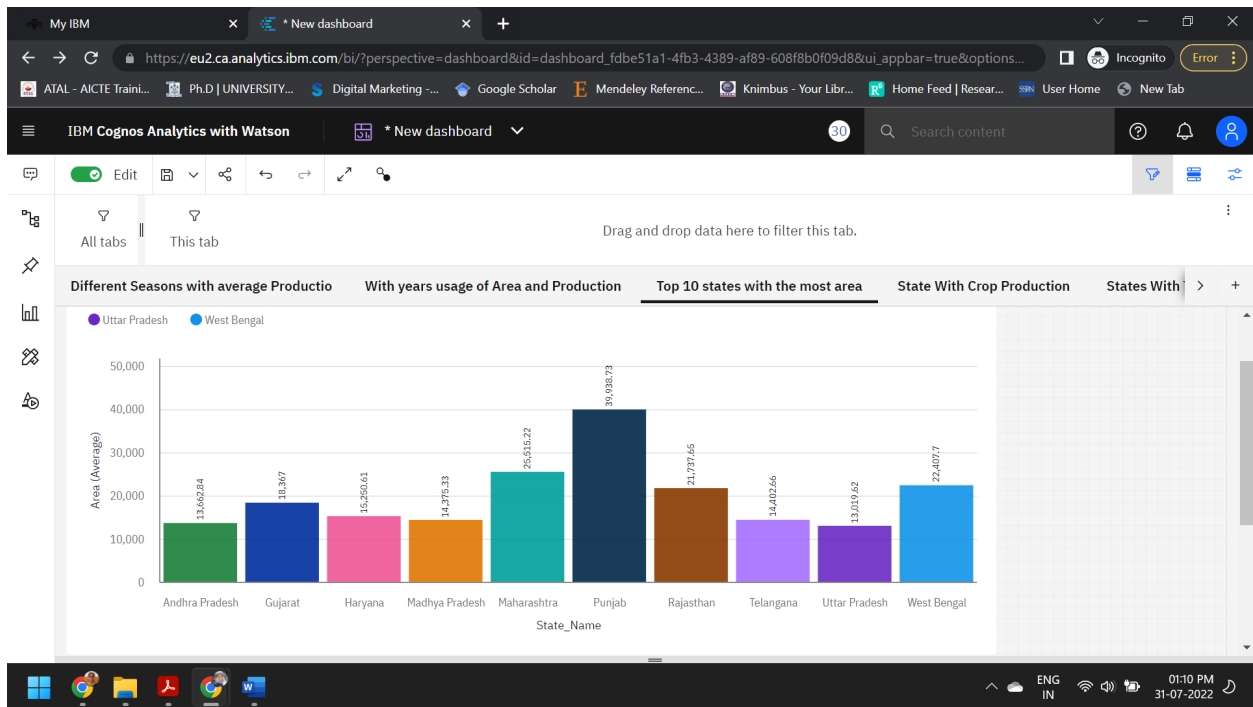

Area by crop/ year has been reduced drastically from 1997 to 1998. later it is reducing with consistant rate.

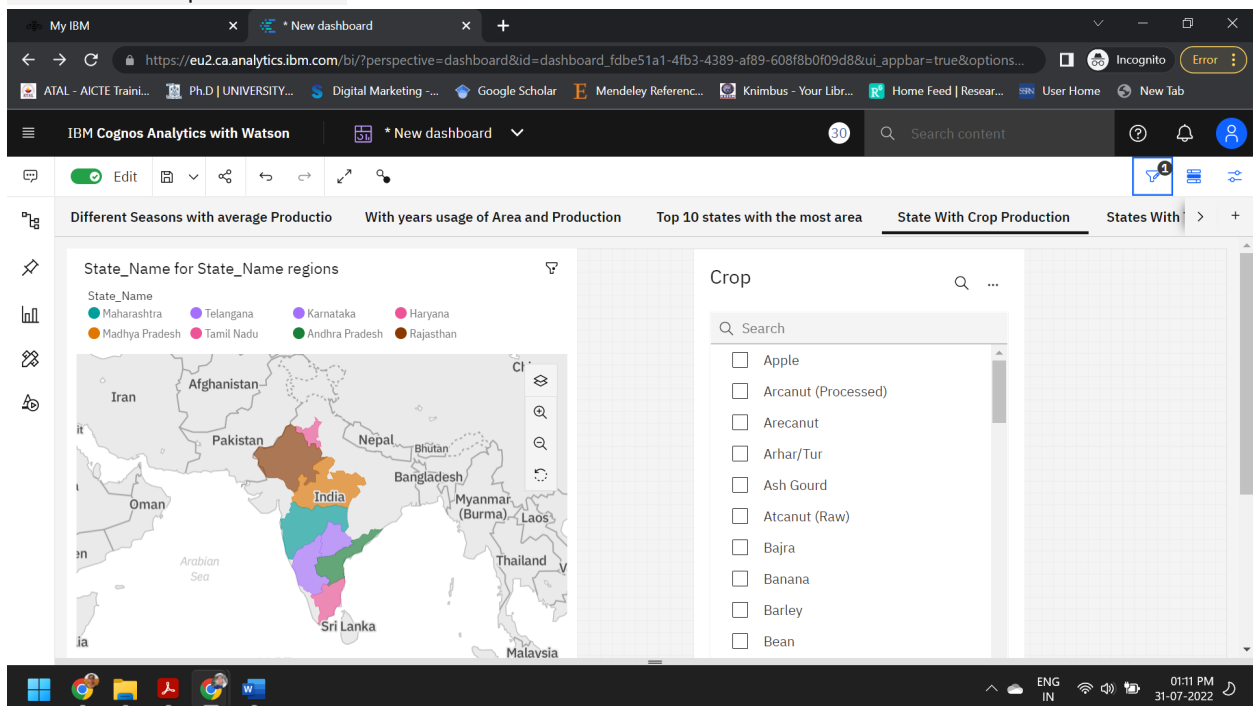

Inspite of reduced the area of of crop still can observe there is improment in the production. it shows there might be adoption of the modern techniques in cultivation, land allocation, irrigation.
